

Dear Hiring Manager,

I am a current full-time student at the University of Alabama in Huntsville. In May 2022 I will be graduating with degrees in both Systems Engineering and Mathematics. The prospect of contributing to Torch Technologies' efforts excites me greatly, and I am sure that the skills I have acquired through both my formal education and through several internships would prove valuable to Torch Technologies' endeavors.

The majority of my work experience I secured through skills I developed in my free time, either out of pure interest or for the sake of simply becoming more skilled. In every instance, I have been able to overcome challenges and complete tasks and projects I would have been unable to previously. This required a strong drive to seek out information on my own, as well as the ability to ask concise questions when required information wasn't readily available.

This was especially the case in my current employment at Arcarithm, where I was quite unfamiliar with the software development environment at first. I quickly adapted to it, and have successfully grown to understand and apply software development practices to artificial intelligence research on multiple projects, and have become a great asset to several teams.

I would love to be able to bring the skills I have acquired to Torch Technologies upon my graduation, and continue to grow significantly, with the help of Torch's vast experience and established infrastructure. I look forward to hearing from you, and I hope to become an asset to Torch Technologies in the near future.

Respectfully,
Raphael Thorp
